

# COACH STATS

GAA MATCH STATISTICS

## User Guide

[coachstats.app](https://coachstats.app)

Covers the pitch-tap recording flow, starting team selection, match analysis, video analysis and club management

# Contents

## 1. Getting Started

- Installing on your phone or tablet
- The six tabs

## 2. Setting Up a Match

- Teams and competition
- Choosing which squad you are recording for
- Selecting your starting 15
- The game clock

## 3. Recording a Match

- The basic flow
- What you can record
- Recording where things happened
- Undoing a mistake
- Substitutions

## 4. Match Analysis

- Half-time dashboard
- Full match statistics
- Understanding the possession figure
- Player statistics
- Shot map

## 5. After the Match

- Saving and reporting
- History and fixtures
- Opposition database

## 6. Squad, Training and Trials

## 7. Video Analysis

- Adding video
- Working with clips

## 8. Clubs and Sharing

- Setting up a club
- Joining a club
- Squads within a club

## 9. Practical Tips

# 1. Getting Started

Coach Stats runs in your browser and installs to your home screen like an app. Everything you record is saved to your device and synced to your account.

## Installing on your phone or tablet

1. Open coachstats.app in Safari (iPhone/iPad) or Chrome (Android).
2. Sign in, or tap Register to create an account.
3. iPhone/iPad: tap Share, then "Add to Home Screen". Android: tap the menu, then "Install app".
4. Launch it from the home screen icon from then on — it works offline once loaded.

*If an update does not appear, close the app fully and reopen it. Coach Stats checks for new versions on launch and every minute while open, then refreshes itself automatically.*

## The six tabs

| Tab     | What it does                                                                                      |
|---------|---------------------------------------------------------------------------------------------------|
| Match   | Set up the fixture — teams, competition, venue, squad and starting 15. Scoreboard and game clock. |
| Record  | Record events during the match by tapping players on a pitch.                                     |
| Trends  | Live possession, score trends and match momentum.                                                 |
| Squad   | Your panel, player stats, training sessions and trials.                                           |
| Stats   | Full match statistics, shooting efficiency, shot map and match notes.                             |
| History | Saved matches, reports, fixtures and the opposition database.                                     |

## 2. Setting Up a Match

Everything in this section is on the Match tab.

### Teams and competition

1. Tap the Home team field and pick your club — you can search over 1,200 GAA clubs or type a custom name.
2. Tap the Away field and choose the opposition the same way.
3. Tap Select Competition and choose from the full GAA and LGFA competition list, from All-Ireland down to county leagues, plus tournaments, blitzes and challenge games.
4. Add a venue if you want it on the match report.

### Choosing which squad you are recording for

If you belong to a club with multiple squads, a Squad selector appears under Competition. Tap it and pick the squad this match is for. The choice sticks between sessions, and the squad name is shown on the Record tab so you always know which panel you are tracking.

### Selecting your starting 15

Tap Select Starting 15 to open the team sheet. Positions are laid out in the standard GAA formation and labelled properly.

1. Tap any position to see your squad. Each player shows their number, name and listed position.
2. Pick a player and they take that position. A player can only occupy one position at a time — if you move someone, their old position is cleared automatically.
3. Use Auto-fill 1–15 to drop in the first fifteen named players, or Clear all to start again.
4. Tap Confirm Starting 15.

*Positions you leave empty appear on the Record pitch with a dashed outline and their position code. Tapping one opens the team sheet rather than recording an event against nobody.*

Your starting 15 is remembered between sessions. Changing squad resets it, since a different panel means a different fifteen.

### The game clock

The clock appears on both the Match tab and the Record tab, and they are the same clock — starting the game or ending a half from either place keeps both in step.

- **Start Game** — begins the first half and locks in who started, which is what makes minutes played possible
- **Half Time** — stops the clock and opens the half-time dashboard
- **Start 2nd Half** — restarts the clock for the second half
- **Full Time** — ends the match
- **1st / 2nd / ET** — sets which period events are recorded against — this is what drives the half-by-half analysis later

### 3. Recording a Match

The Record tab is built around a pitch. You tap the player, then say what happened — rather than hunting through a list of buttons.

#### The basic flow

1. Choose My Team or Opposition at the top.
2. Tap the player who was involved. Your own players show their number and surname; opposition players show their jersey number.
3. Pick the event from the menu that appears.
4. Pick the outcome. The player is already tagged, so there is no second tagging step.

#### What you can record

| Event           | Outcomes                                                            |
|-----------------|---------------------------------------------------------------------|
| Shot from Play  | Point, 2 Pointer, Goal, Blocked, Wide, Saved, Short                 |
| Shot from Free  | Same as above                                                       |
| Ball Won        | In Contact, Tackle, Interception                                    |
| Ball Lost       | Hand Pass, Kick Pass, In Contact, Handling, Over Carrying           |
| Kickout         | Won Clean, Break Won, Loss Clean, Break Loss, Short Won, Short Loss |
| 45m Free        | Scored, Wide, Short, Pass, Ball Lost                                |
| Turnover Forced | Tackle, Interception, Pressure                                      |
| Mark            | Won, Lost                                                           |
| Possession      | Single tap — no outcome screen                                      |
| Attack          | Score, Ball Lost, Turned Back (team action, no player tag)          |
| Foul Given      | Shooting, Cynical, Dissent, Dangerous                               |
| Card            | Yellow, Black, Red                                                  |

#### Recording where things happened

Shots, 45s, ball lost and turnovers ask you to tap a pitch to show where they happened. The pitch is drawn to proper GAA markings — 13m, 20m, 45m and 65m lines, the small and large rectangles, the 13m arc and the 40m two-point arc — so you can place events accurately.

Tap the spot and it closes automatically, or tap Skip if you would rather not log a location. These taps are what power the shot map, shooting-by-zone and ball-lost-by-zone analysis.

## Undoing a mistake

After every event a short bar appears at the bottom with an Undo button. Tap it and the event is removed completely — the scoreboard, the tallies and the player's own stats are all put back as they were. The bar disappears on its own after a few seconds.

You can also delete any event later from the match timeline using the ✕ beside it, and the Undo buttons on the scoreboard remove the last score for either side.

## Tidying up the event menu

The event menu puts your most-used events at the top automatically. If there are events you never record, tap "Choose which events show here" and untick them.

## Substitutions

Open Substitutions below the pitch and tap Record Substitution. Choose who is coming off and who is coming on.

The pitch updates immediately — the incoming player takes that position, and tapping there from then on tags them rather than the player they replaced. Substitutions also feed the minutes played figures on each player card.

*If you type a name that is not in your squad, the substitution is still logged, but you will be prompted to add them to the squad first — otherwise there is no player record to attach stats to.*

## 4. Match Analysis

### Live view during the game

The Trends tab updates as you record: possession split, score trend, ball won, and momentum over the last few scores.

### Half-time dashboard

Tap Half Time on the clock and the dashboard opens automatically with the first-half picture — scoring, shooting, kickouts, discipline, and alerts for anything that has happened repeatedly, such as a run of wides.

### Full match statistics

The Stats tab holds the complete breakdown. At the top, a Full Match / 1st Half / 2nd Half toggle filters everything below it.

- **Shooting Efficiency** — conversion rate overall, from play and from frees, shown as a percentage with the raw numbers behind it
- **Kickout Retention** — the percentage of your own kickouts you kept
- **Shooting by Zone** — conversion from each area of the pitch, built from the shot locations you tapped
- **Ball Lost by Zone** — where you are conceding possession
- **Attacks** — total attacks, how they ended, attack conversion and attacks per score

Below that are the usual full breakdowns for shots, ball won and lost, kickouts, 45s, discipline and player performance.

### Understanding the possession figure

Coach Stats reports possession in one of two ways, and always tells you which one you are looking at.

- **Possession** — the real split, calculated from Possession events you have tagged. This appears once you have tagged possessions for both teams.
- **Dominance Index** — an estimate used when possessions have not been tagged, weighted from ball won, kickouts won and scores.

*These two are not comparable with each other. If you only tag possessions for one team, the app deliberately falls back to the estimate rather than reporting a misleading one-sided split. A short note under the figure always explains which is in use.*

### Player statistics

The Squad tab shows a card per player with scoring, shots, ball won and lost, kickouts and a performance score. Cards also show minutes played, along with score and ball won per 60 minutes, so a player who does well in twenty minutes off the bench is not buried by raw totals.

### Shot map

On the Stats tab, tap Shot Map for a visual plot of every shot on a GAA pitch, colour-coded by outcome and filterable by team and shot type.

## 5. After the Match

### Saving and reporting

1. On the Stats tab, add any match notes you want to keep — these save automatically.
2. Tap Save Match to store it in History.
3. From a match card in History you can generate a full PDF report, share it, or open the shot map.

### History

Every saved match is listed with its scoreline and result. Search by opponent or competition, tap any match for the full statistical detail, and use Season Summary for aggregated form across the season.

### Fixtures

History → Fixtures lets you add upcoming games so the season is planned in one place.

### Opposition database

History → Opposition DB keeps a profile for every club you have played: your record against them, past matches, scout reports and your own notes.

#### Tracking their players

Each profile has a Their Players section. Add names against jersey numbers and the app builds a picture of what each opposition number has done against you across every match — scores, shots, ball won and how many times you have faced them. The biggest scorer is flagged as their danger man.

Once named, those players appear by surname on the Opposition pitch when you record, so tagging says "Opposition #11 Murphy" rather than a bare number.

## 6. Squad, Training and Trials

### Building your squad

The Squad tab holds 34 slots. Tap an empty slot to add a player with their name and position; tap an existing player to edit or remove them. Slot numbers are the shirt numbers used everywhere else in the app.

### Training sessions

Squad → Training records sessions, attendance and player wellness. The Readiness Dashboard summarises how the panel is travelling.

Wellness can be collected from players directly through a personal link, so they self-report rather than you chasing it.

### Trials

Squad → Trial runs trial sessions with structured grading, including a link that lets other coaches grade players on their own phones.

## 7. Video Analysis

Coach Stats can attach video to a match and let you tag clips against it.

### Adding video

From History, tap Video on a match card, or start a video-first analysis from scratch. You have two options:

- **Paste Link** — a YouTube link or a direct MP4 URL
- **Upload File** — choose a video file from your device — the upload shows progress as it goes

*Uploads are capped at 500MB per file. Full match footage can be larger than that, so trimming or compressing first is usually wise, and a link avoids the upload entirely.*

### Working with clips

Once the video is loaded you can tag moments as you watch, and jump back to them later. Clips are stored with the match, so the footage and the statistics stay together.

## 8. Clubs and Sharing

Coach Stats works for an individual coach or for a whole club.

### Setting up a club

1. Tap the  button in the top bar.
2. Choose Create Club, enter the club name and county, and confirm. You become the club administrator.
3. Share the invite code with your other coaches.

### Joining a club

Tap , choose Join Club and enter the invite code you were given.

### Squads within a club

A club can hold multiple squads — senior, under-20, minor and so on. Each has its own panel and its own matches. Coaches can be assigned to the squads they work with, and you choose which squad a match belongs to on the Match tab.

## 9. Practical Tips

### Recording quickly during a game

- Hide the events you never use, so the menu is short and the buttons stay large.
- Set your starting 15 before throw-in — surnames on the pitch are far quicker to find than numbers alone.
- Do not worry about mis-taps. The Undo bar takes one tap and puts everything back.
- If you cannot keep up with locations, tap Skip. The event is still recorded, you just lose the zone detail for that one.
- Keep the half selector accurate — it is what makes the half-by-half comparison worth reading.

### Getting the most from the analysis

- Tag possessions for both teams if you want a true possession percentage. Tagging one side only will keep the app on the estimate.
- Record attacks as well as shots — attack conversion tells you something shot counts cannot.
- Tap shot locations consistently. Shooting by zone is only as good as the locations behind it.
- Name opposition players as you go. After two or three matches their profile becomes genuinely useful for planning.

### Data and syncing

- Matches save to your device and sync to your account, so they survive reinstalling.
- The app works offline during a match and syncs when you are back on a connection.
- Export any match as a PDF report to share with players or selectors.
